## TURBINE TECHNOLOGY

### REDUCTION IN ROTATIONAL ENERGY

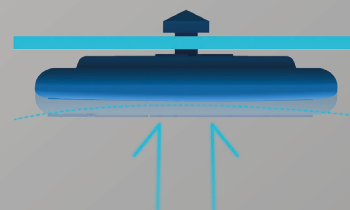

#### MOVEMENT

360° Turbine Technology reduces peak brain rotational acceleration by up to 40%

### PEAK BRAIN ACCELERATION

#### REDUCTION IN PEAK BRAIN ACCELERATION

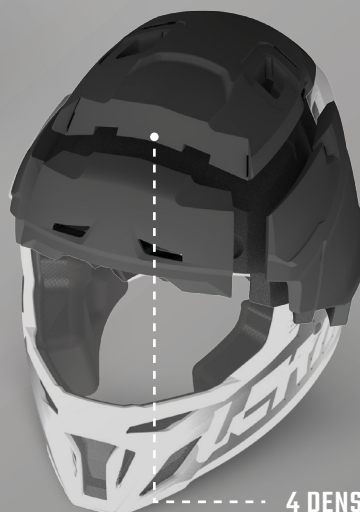

The Movement of The Turbines Reduces the Peak Brain Rotational Acceleration

### 360° TURBINE TECHNOLOGY

All Leatt helmets feature 360° Turbine Technology. This patented design utilizes a network of small discs constructed of a non-Newtonian, energy-absorbing material. Because these Turbines can move 360° (omnidirectional), this technology has two exclusive advantages: namely the reduction of rotational acceleration to the head and brain and the absorption of energy upon impact at concussion level.

360° Turbine Technology was developed and tested in Leatt's world-class lab in Cape Town, South Africa. Helmets equipped with this technology not only exceed global test standards, but also outperform our own rigorous internal standards defined by Dr. Chris Leatt in his two decades of experience of protecting extreme sports athletes. As our white papers demonstrate, Leatt's testing methodology is based on this meticulous research and experience.

**DESCRIPTION**  
Helmet bag LEATT Moto

A mountain biker wearing a green helmet, goggles, and a colorful long-sleeved jersey is riding a trail bike on a rocky path. The rider is framed by a dark wooden structure, possibly a gate or a part of a building. The background shows a hazy, mountainous landscape with some greenery.
